

ISO/IEC 27002 Summary Notes

Information Security Control Guidance

Project Cybersecurity Internship Website	Purpose Original learning summary for website visitors
--	--

Educational note: This document is an original summary for internship learning. It is not a replacement for official ISO standards or licensed documents.

Overview

ISO/IEC 27002 gives guidance for security controls that help organizations reduce information security risks.

Main Control Categories

- Organizational controls: policies, responsibilities, supplier security, threat intelligence, and incident management.
- People controls: awareness training, confidentiality, screening, remote work, and role changes.
- Physical controls: secure areas, equipment protection, clear desk practices, and facility access.
- Technological controls: access control, backup, logging, encryption, malware protection, and secure development.

How It Supports ISO 27001

- ISO 27001 defines the management system requirements.
- ISO 27002 explains control guidance that can support risk treatment and daily security operations.

How This Supports the Website

This downloadable note gives visitors a compact reference after reading the website page. The website remains the main learning hub, while this PDF acts as a professional supporting handout.
