

ISO 42001:2023 Summary Notes

AI Management System Governance

Project Cybersecurity Internship Website	Purpose Original learning summary for website visitors
--	--

Educational note: This document is an original summary for internship learning. It is not a replacement for official ISO standards or licensed documents.

Overview

ISO 42001 focuses on management system practices for organizations that develop, provide, or use AI systems.

AI Governance Areas

- AI policy, objectives, roles, and accountability.
- AI system inventory with intended purpose and ownership.
- AI risk assessment covering privacy, bias, transparency, reliability, security, and misuse.
- Data governance for quality, source, legality, retention, and protection.
- Human oversight, monitoring, incident handling, and continual improvement.

Why It Matters

- AI systems can create privacy, fairness, security, and reliability risks.
- A management system helps organizations assign responsibility and monitor AI systems after deployment.

How This Supports the Website

This downloadable note gives visitors a compact reference after reading the website page. The website remains the main learning hub, while this PDF acts as a professional supporting handout.
